16,000 permanent staff worldwide

400 awards in five years

Mott MacDonald has been appointed by the Department for International Development (DFID) as the implementation agent for the Skills for Employment (S4E) and Training for Resilience (T4R) programme in Mozambique.

At Mott MacDonald, we believe that economic growth is the key driver for poverty reduction. We are the global leaders in delivering inclusive and sustainable solutions to support livelihoods, enhance food security, create decent jobs, and increase incomes.

We implement innovative approaches by placing young men and women at the centre of growth, rather than as the “trickle-down” effect of growth. We do so, by building the basic blocks for sustained economic development- enhancing competitiveness, strengthening local capacities, enabling policies and rules of law.

At the heart of each of our programs lie the principles of sustainable use of resources, responsible business development and women empowerment. We promote ownership and build capacities, by engaging private sector, government and local institutions. Our local presence provides us with in-depth insight and understanding of sectors, stakeholders, opportunities and challenges.

All of these help us develop informed solutions across a wide range of sectors to drive the engine of growth and create sustainable pathways for boosting economies.

Our work remains to be rooted in creative thinking, entrepreneurship and sustained strategies.

We help our clients by developing and delivering sustainable solutions in the fields of:

1. Innovation and entrepreneurship
2. Market and private sector development
3. Employment creation and skills development
4. Agriculture development and food security
5. Business Enabling Environment

- **In South Sudan**, we are supporting the development of the agribusiness sector through enabling a better business environment- by providing access to finance, business advisory services and value chain interventions to over 300 entrepreneurs.
- **In Bangladesh**, informed by a national-wide survey involving over 3000 SMEs across a wide range of clusters and regulatory assessment, we are developing the National SME Strategy and building the capacity of the SME Foundation to support entrepreneurship.
- **In Somaliland**, we are working with the private sector to improve access to affordable electricity through the promotion of renewable energies, piloting the development and implementation of hybrid mini-grids.
- **In Indonesia**, we facilitate a better business environment through the development of an innovative grant facility to support concrete local economic development projects in the sectors such as agriculture, fisheries, livestock and SME sector
